

BINO HLONGWANA

FULL-STACK SOFTWARE DEVELOPER

Pretoria, South Africa | HlongwanaBino@gmail.com | +27 81 591 3919 | github.com/Robotbino | [LinkedIn](#) | UTC+2 /GMT+2

PROFILE

Full-stack software developer with 3 years as a core engineer on an enterprise Java EE case-management and workflow platform, used daily by a national government department to run citizen benefit programmes across a six-role approval chain. Enterprise depth in EJB services, Activiti BPMN orchestration, and JSF frontends on WildFly is matched by a project-backed modern stack: Spring Boot REST APIs secured with JWT, with React and Angular frontends in TypeScript. Seeking a mid-level full-stack role building production systems end-to-end, with particular interest in workflow-heavy, API-driven products.

PROFESSIONAL EXPERIENCE

Junior Java Developer (Full-Stack), SITA (State Information Technology Agency) Jul 2023 - Present

Pretoria, South Africa

Core engineer on an enterprise case-management and workflow platform, responsible for feature delivery and defect resolution across the full stack: EJB business services, Activiti BPMN process definitions driving a six-role approval chain, a JSF (PrimeFaces, BootsFaces) UI layer, and Microsoft SQL Server, shipped as Maven WAR deployments to WildFly.

- Consolidated document and attachment handling from six role-specific modules into one shared subsystem, cutting duplicated logic by ~60% and reducing onboarding of new workflow roles from days to hours.
- Reduced manual case-processing overhead by ~70% by replacing record-by-record capture with a batch submission pipeline built around multi-step, fail-fast validation.
- Eliminated a recurring class of silent form-submission failures on multi-step approval screens by diagnosing and fixing nested-form and component-tree violations in JSF.
- Restored correct task routing across the full approval chain by tracing defects through Activiti candidate-group configuration and runtime task queries, then documented the routing model so the whole team can debug assignment issues.
- Improved responsiveness of attachment- and tab-heavy screens by resolving partial-render (AJAX) and component-binding conflicts.
- Works in Agile sprint cycles with a cross-functional team: sprint planning, code review on every change, and retrospectives, on a large production codebase that evolves while in daily use.

TECHNICAL PROJECTS

Game Store: Full-Stack E-Commerce Platform

[GitHub](#)

React, Vite, TypeScript, Spring Boot, Spring Security (JWT), JPA/Hibernate, MySQL

- Designed a storefront and admin platform end-to-end: a React/Vite/TypeScript frontend consuming a Spring Boot REST API with 10+ endpoints across product catalogue, cart, and order domains, backed by JPA/Hibernate on MySQL.
- Implemented stateless JWT authentication and role-based access control with Spring Security, separating customer and admin capabilities.
- Developed with an agentic AI workflow: Claude Code runs test-first debugging and refactoring passes, and every change passes human review before merging.

Employee Manager: Role-Based CRUD Platform

[GitHub](#)

Angular, Spring Boot, Spring Security, JWT, MySQL

- Built distinct admin and standard-user workflows enforced by stateless JWT authentication, HTTP interceptors, and protected route guards, applying least-privilege role separation across the application.

Developer Portfolio: Production SPA

[GitHub](#) | [Live](#)

Angular, TypeScript, RxJS, SCSS

- Deployed a component-driven SPA with RxJS reactive patterns, lazy-loaded routing, and responsive SCSS, live on Netlify.

Code Pairs: Memory Card Game

[GitHub](#)

React, TypeScript, CSS3

- Created a programming-themed memory matching game with card shuffling, real-time scoring, and responsive layouts across breakpoints.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, SQL, HTML/CSS

Enterprise Backend: Jakarta EE (EJB, JPA/Hibernate, JAX-RS), Activiti BPMN, WildFly

Modern Stack: Spring Boot, Spring Security (JWT), REST API design

Frontend: React, Angular, RxJS, Vite, JSF (PrimeFaces, BootsFaces)

Databases: MySQL, Microsoft SQL Server

Tools & Practices: Git/GitHub, Maven, Postman, JUnit, IntelliJ IDEA, Agile/Scrum, code review, AI-assisted development

EDUCATION

BSc Information Technology, North-West University (Vaal Campus)

2021 - 2023

CERTIFICATIONS

- IBM: Artificial Intelligence Fundamentals
- Scrimba: JavaScript
- Scrimba: HTML and CSS Fundamentals

Currently studying (not yet certified): Oracle Certified Associate, Java SE 8 (1Z0-808), supported by a self-built spaced-repetition flashcard CLI; Go and Git fundamentals via Boot.dev.
