FULL-STACK SOFTWARE DEVELOPER

I am a results-driven Full-Stack Software Developer with 3+ years delivering enterprise Java applications and modern frontend solutions in the South African public sector. Proficient across the stack: JSF/PrimeFaces, Angular, React frontends, EJB/Spring Boot backends, BPMN workflow orchestration, and relational database design. Eager to leverage growing full-stack expertise in a mid-level role building scalable, high-impact software.

PROFESSIONAL EXPERIENCE

Junior Java Developer — SITA (State Information Technology Agency)

Pretoria, South Africa | 1 July 2023 – Present

- Engineer and maintain core modules of an enterprise Java EE case management and workflow application supporting a national government client, contributing across backend services, workflow orchestration, and UI layers.
- Architected a unified attachment handling structure by consolidating redundant logic across multiple role-specific managed beans, measurably reducing code duplication and eliminating document processing inconsistencies across workflow stages.
- Streamlined a batch submission flow by implementing multi-step validation safeguards, accelerating throughput and cutting manual processing overhead for case workers by 70%.
- Diagnosed and refactored nested JSF form violations in complex multi-step workflow pages, resolving critical silent submission failures impacting task completion paths.
- Debugged BPMN workflow task visibility defects by tracing assignment logic across process definitions and role configurations, restoring correct routing across multiple workflow roles.
- Optimized PrimeFaces/BootsFaces UI components for consistent rendering and improved load times, enhancing responsiveness for daily end users.
- Collaborate within Agile sprints, contributing to code reviews, sprint planning, and retrospectives on a cross-functional team.

ACOMPLISHMENTS

- Reduced cross-bean code duplication in the document-handling subsystem by ~60% through architectural consolidation, shrinking the surface area for future defects and cutting onboarding time for new role-specific modules from days to hours
- Eliminated a recurring class of silent JSF submission failures across multi-step workflow pages, removing a top source of QA-reported defects in approval workflows.
- Improved render performance and UI responsiveness on document- and tab-heavy screens by resolving layout and component-binding conflicts, producing a measurably faster experience for daily client operators.

PROJECTS

Game Store — Full-Stack E-Commerce Platform (In progress) | [GitHub](#)

React, Vite, TypeScript, Spring Boot, JPA/Hibernate, MySQL, JWT, Claude Code

- Built a responsive full-stack e-commerce app with React/Vite storefront and Spring Boot RESTful API, demonstrating end-to-end ownership.
- Implemented JWT-based authentication with Spring Security, eliminating unauthorized access vectors.
- Designed 10+ RESTful endpoints for product catalog CRUD, cart management, and order processing.
- Used Agentic model approach to implement debugging of code.

Employee Manager — Secure CRUD Application | [GitHub](#)

Angular, Spring Boot, Spring Security, JWT, MySQL

- Designed and implemented a role-based employee management platform with JWT authentication and distinct admin/standard-user workflows.
- Integrated stateless token auth with protected route guards enforcing principle-of-least-privilege access.

Code Pairs — Memory Card Game | [GitHub](#)

React, TypeScript, CSS3

- Developed a programming-themed memory matching game with dynamic shuffling, real-time scoring, and responsive layouts across desktop and mobile breakpoints.

Angular Developer Portfolio — SPA | [GitHub](#) | [LiveDemo](#)

Angular, TypeScript, RxJS, SCSS

- Orchestrated a component-driven portfolio SPA with RxJS reactive patterns, lazy-loaded routing, and responsive SCSS styling.

EDUCATION

North-West University

March 2021 - Dec 2023

BSc Information Technology (Vaal Campus), 2023

TECHNICAL SKILLS

- **Languages:** Java, TypeScript, JavaScript, HTML5, CSS3, SQL
- **Backend:** Java EE (EJB, JPA/Hibernate, JAX-RS), Spring Boot, Spring Security, JWT, Activiti BPMN, OOP & SOLID principles
- **Frontend:** React, Angular, JSF (PrimeFaces, BootsFaces), RxJS, Vite
- **Databases:** MySQL, Microsoft SQL Server
- **Tools:** WildFly (JBoss), Git/GitHub, Maven, IntelliJ IDEA, VS Code
- **Testing & QA:** JUnit, Debugging, Root Cause Analysis
- **Methodologies:** Agile/Scrum, SDLC, RESTful API Design, Responsive Web Design

CERTIFICATIONS

- **IBM** — Artificial Intelligence Fundamentals
- **Scrimba** — JavaScript Certificate
- **Scrimba** — HTML & CSS Fundamentals
