BINO HLONGWANA

FULL-STACK SOFTWARE DEVELOPER

Pretoria, South Africa | HlongwanaBino@gmail.com | +27 81 591 3919 | github.com/Robotbino | LinkedIn | UTC+2 (SAST)

PROFILE

Software developer with two years at SITA, from intern to junior full-stack developer, now on an enterprise Java EE case-management and workflow platform used daily by a national government department to run citizen benefit programmes across a six-role approval chain. Enterprise depth in EJB services, Activiti BPMN and JSF on WildFly is matched by a project-backed modern stack: Spring Boot REST APIs with JWT authentication, consumed by React and Angular clients in TypeScript. Seeking a mid-level full-stack role building production systems end-to-end, with particular interest in workflow-heavy, API-driven products.

PROFESSIONAL EXPERIENCE

Junior Full-Stack Developer, SITA (State Information Technology Agency) **Jun 2026 - Present**
Experiential Trainee (Java Developer) **Jun 2025 - May 2026**
Pretoria, South Africa

Delivers features and resolves defects across the full stack of a case-management and workflow platform in daily government use: EJB services, JPA/Hibernate, Activiti BPMN process definitions driving a six-role approval chain, a JSF (PrimeFaces, BootsFaces) UI layer and Microsoft SQL Server, deployed as Maven WARs to WildFly.

- Consolidated document and attachment handling from six role-specific modules into one shared subsystem, cutting duplicated logic by ~60% and onboarding time for new workflow roles from days to hours.
- Replaced record-by-record capture with a batch submission pipeline built around multi-step, fail-fast validation, reducing manual case-processing overhead by ~70%.
- Eliminated a recurring class of silent form-submission failures on multi-step approval screens by diagnosing and fixing nested-form and component-tree violations in the UI layer.
- Restored task routing across the approval chain by tracing defects through candidate-group configuration and runtime task queries, then documented the routing model so the team can debug assignment issues.
- Improved the responsiveness of attachment-heavy and tab-heavy screens by finding and resolving the partial-render (AJAX) and component-binding conflicts that slowed them.
- Works in Agile sprints with a cross-functional team on a large production codebase that evolves while in daily use: sprint planning, code review on every change and retrospectives.

Software Development Intern, SITA **Jun 2024 - May 2025**

- Built new screens and features in Angular with TypeScript and Angular Material for an application already in production.
- Fixed bugs and made enhancements in that application's existing front end.
- Presented and demoed new features to clients and took part in daily stand-ups with the development team.

TECHNICAL PROJECTS

Game Store: Full-Stack E-Commerce Platform **Frontend** | **Backend**
React 19, TypeScript, Vite, Spring Boot 3, Spring Security (JWT), JPA/Hibernate, Flyway, MySQL

- Designed a storefront and a route-guarded admin portal in React, both consuming a 26-route Spring Boot REST API covering auth, a paged and searchable catalogue, users, wishlist, orders, rewards and library.
- Secured the API with stateless JWT authentication, BCrypt-hashed passwords and USER/ADMIN roles enforced in one ordered Spring Security filter chain that takes identity only from the token.
- Implemented checkout as one transaction that snapshots prices and records points earned and redeemed in a ledger; six Flyway migrations own the schema and 63 MockMvc integration tests run on H2.

- Developed with Claude Code as co-author: features land together with their integration tests and every change is reviewed before merge.

Employee Manager: Spring Boot API with an Angular Client **API** | **Client**

Angular 19, TypeScript, Spring Boot 3, Spring Security (JWT), JPA/Hibernate, MySQL

- Built an employee CRUD API with Spring Data JPA: register and login return a JWT, passwords are hashed with BCrypt and a custom filter validates bearer tokens in a stateless chain.
- Wrote the Angular client: token interceptor, guard with return URL, light and dark themes checked against WCAG AA contrast, table columns dropped by priority on small screens, and ADRs for UI decisions.

Developer Portfolio: Angular 21 and WebGL **GitHub** | **Live**

Angular 21, TypeScript, Signals, WebGL (OGL), CSS

- Structured the site as one looping scroll with no router: one requestAnimationFrame loop drives every animation, OnPush is lint-enforced throughout and the WebGL star map in OGL has an SVG fallback.
- Backed it with 263 Jasmine/Karma unit tests (scroll, motion and star-map maths in pure functions), GitHub Actions CI on every push, a build-generated Content-Security-Policy header, 15 ADRs, keyboard navigation and reduced-motion support.

Code Pairs: Memory Game in Angular **GitHub** | **Live**

Angular 19, TypeScript, Signals, SCSS

- Created a memory game on an Angular Signals engine: three difficulty levels, combo multiplier up to 3x, wins ranked S to C, keyboard-operable cards with screen-reader announcements and 28 unit tests.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, SQL, HTML/CSS

Enterprise Backend: Jakarta EE (EJB, JPA/Hibernate), Activiti BPMN, WildFly, Maven WAR deployments

Modern Stack: Spring Boot 3, Spring Security (JWT), Spring Data JPA, Flyway, REST API design

Frontend: Angular (Signals, Angular Material), React (React Router), Vite, JSF (PrimeFaces, BootsFaces), WebGL (OGL, GLSL), SCSS, accessibility (WCAG AA, keyboard, reduced motion)

Databases: MySQL, Microsoft SQL Server, H2 (tests)

Testing & Tools: JUnit 5, MockMvc, Jasmine, Karma, ESLint, Git/GitHub, GitHub Actions, Postman, Agile/Scrum, code review, architecture decision records, AI-assisted development with Claude Code

EDUCATION

BSc Information Technology, North-West University (Vaal Campus) **2021 - 2023**

CERTIFICATIONS

- IBM: **Artificial Intelligence Fundamentals**
- Scrimba: **JavaScript** (December 2025)
- Scrimba: **HTML and CSS Fundamentals** (December 2025)
- Anthropic Academy: **Claude 101** (April 2026)
- Anthropic Academy: **Claude Code 101** (April 2026)

Currently studying (not yet certified): Oracle Certified Associate, Java SE 8 (1Z0-808); AWS Certified Cloud Practitioner.
